

ISODOMUS

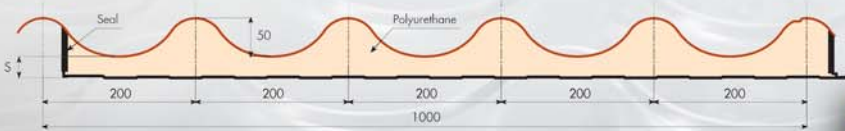

ISODOMUS represents the greatest evolution in terms of roofing panel design by combining two of the most important elements in today's architecture...Function, and Form.

ISODOMUS has revolutionised the concept of creating an incredibly strong, fast to install, waterproof, insulated, lightweight, and durable roof panel whilst achieving fantastic looks.

Being an insulated panel - ISODOMUS allows for the insulation to be dealt with on the exterior layer thus eliminating the excessive heat loads created within the ceiling cavity from conventional systems which require ventilation or other cooling methods. The 60mm ISODOMUS achieves an amazing 3.2 R value whilst only weighing 11.7kg per sqm. Furthermore ISODOMUS is incredibly strong and can span significant distances between supports which saves huge costs in time and materials.

ISODOMUS is also available in very long lengths up to 10.3m which results in incredibly fast installation times. The finishes available on ISODOMUS are extensive with textured 'cement like' finishes through to copper.

All things considered - ISODOMUS offers the next generation in design technology whilst maintaining the traditional look of terracotta.

Features:

- ✓ Lightweight - 11.7 kg/sqm - 60mm
- ✓ Insulated - .31 W/sqm K (R 3.2) - 60mm
- ✓ Strong - able to span up to 2.5m* trafficable
- ✓ Quick to install - long length panels
- ✓ Durable - premium coatings allow for superior life
- ✓ Aesthetics - has the appearance of traditional terracotta
- ✓ Economical - priced competitively to the market
- ✓ Further savings - insulation and installation costs
