

About Max:

Max is a highly resistant exterior cladding material used extensively throughout the world as a ventilated façade material which offers unmatched performance in function and form. Its resistance against chemicals, abrasion, UV, and impact propels Max as one of the most preferred cladding materials throughout Europe.

Max is an organic material in the family of HPL (High Pressure Laminate). Max is a world leader in this technology which conforms to the EU standard EN 438-6 Type EDF. Max panel's basic composition consists of layers of cellulose fibres impregnated with a fire retardant phenol resin then pressed at high temperature and high pressure to fuse together as one homogeneous panel that has extremely high resistance to all weathering conditions. Max also offers further protection with an additional PUR layer on the surface for added hardening and also protection against most chemicals allowing the panel to be cleaned very easily when graffiti is evident.

Properties

- High weather resistance
- Optimal light-fastness
- Double hardened
- Scratch resistant
- Solvent resistant
- Easy to clean
- Impact resistant
- Suitable for all exterior applications
- Decorative
- Self-supporting
- Bending resistant
- Frost insensitive
- Heat insensitive
- Free from heavy metals
- Easy to install

the art of
perfection.
